

Ashik K

MERN Stack Developer

ashikk.dev@gmail.com | +91 8129842796 | Portfolio | GitHub | LinkedIn

Profile

MERN Stack Developer based in Kannur, Kerala, with two years of professional experience building and shipping web applications using React, Next.js, TypeScript, Node.js and modern backend technologies. Experienced across collaborative productivity platforms, real-time applications, third-party API integrations, workflow automation and cloud deployment, and comfortable working directly with clients to turn product requirements into reliable, user-friendly solutions.

Experience

MERN Stack Developer, Dignizant Technologies LLP August 2024 – Present

Collaborative Workspace & Productivity Platform (SaaS)

- Developed and maintained a multi-module workspace platform supporting spaces, channels, groups, folders, boards, threads, templates, custom fields and activity feeds.
- Built responsive, reusable interfaces with **React, TypeScript, Vite and Tailwind CSS**, including board and Kanban functionality with drag-and-drop, custom fields, filtering, sorting and user assignment.
- Delivered real-time synchronisation using **Socket.IO and REST APIs** with permissions and activity tracking, plus AI-powered document workflows covering file uploads, streaming AI responses and in-app document viewing.

Team Collaboration & Messaging Platform (SaaS)

- Contributed across the stack – frontend interfaces, backend APIs and database interactions – on a product covering shared spaces, live sessions, boards, saved views, file drive, contacts and messaging.
- Rebuilt the authentication module UI and the global file-drive screens, overlays and filter panels, and implemented an offline-capable client data layer using **IndexedDB and SQLite**.
- Built the contacts and chat experience end to end and authored backend engineering tickets specifying endpoints, data models and acceptance criteria.

Platform Engineering & Client Integrations

- Owned deployment and infrastructure for a client product using **AWS EC2, S3, Docker, Nginx and SSL/Certbot**, and built backend services with **Node.js, Express.js, MongoDB, PostgreSQL, MySQL and Prisma**.
- Built integrations synchronising customer and business data across third-party CRM, accounting and estimation systems using **OAuth, webhooks, n8n and Zapier**.
- Implemented healthcare interoperability with a **FHIR server and validation**, geolocation-based pricing APIs with **OpenStreetMap**, and blockchain payments via the **Stellar Network (SEP-31)**.

Technical Skills

Languages: JavaScript, TypeScript, SQL, HTML, CSS

Frontend: React, Next.js, Vite, Tailwind CSS, Redux

Backend: Node.js, Express.js, REST APIs, Socket.IO, JWT & OAuth

Databases & Client Storage: MongoDB, PostgreSQL, MySQL, Supabase, Redis, SQLite, IndexedDB, Prisma

Cloud & DevOps: AWS EC2, AWS S3, Docker, Nginx, Git, SSL/Certbot

Integrations & Automation: OAuth, Webhooks, Axios, n8n, Zapier, CRM & accounting platform APIs

Other Technologies: FHIR, OpenStreetMap, Stellar Network, SEP-31, Cloudinary, Figma

Awards & Recognition

2nd Prize – Internal AI Hackathon, Dignizant Technologies January 2026

- Won second prize as a team for building Smart AI Test Suite, an AI-powered automated unit-test generator.

Pioneer of Learning, Dignizant Technologies LinkedIn October 2025

- Recognised during the company's 15th anniversary for continuous learning and contributing to a collaborative learning culture.

Employee of the Quarter, Dignizant Technologies LinkedIn Q1 2025

- Awarded for consistent contributions, teamwork and growth within the team.

Education

MERN Stack Development, Brototype Calicut 2023 – 2024

Higher Secondary (Vocational, Junior Software Developer), VHSS Chirakkara 2020 – 2022

Projects

Smart AI Test Suite (SAT)

npm | GitHub

- Published npm CLI that uses AI agents to generate, run and auto-fix unit tests, producing ready-to-run test suites in minutes.
- Analyses code structure, dependencies and edge cases to decide what to cover before generating tests.
- Built as a team entry for an internal AI hackathon, where it won second prize.

Technologies: TypeScript, Node.js, Groq, Llama 3.3, Jest

AshikNow – Personal Analytics Hub

GitHub | Live

- Terminal-styled single page pulling live data from every platform I use – code, chess, typing, fitness, music and films – with journey pages and a compare mode.
- Server-side API routes normalise each provider's response and keep credentials off the client, while public feeds are fetched in the browser to cut latency.
- Goal tracking rendered as ASCII progress bars driven by a single declarative config file.

Technologies: Next.js, TypeScript, React, Vercel

Pause-ture – Windows Break Reminder

GitHub

- Desktop app that enforces breaks with fullscreen, countdown-gated popups for eye, posture, water and walk reminders.
- Background Rust scheduler with idle detection, so reminders are skipped when the machine is unattended.
- Ships as a roughly 4 MB Tauri installer, a fraction of the size of an equivalent Electron build.

Technologies: Rust, Tauri, TypeScript
